Vigenere Cipher

Tam

Basic knowledge

Simple substitution cipher

The most famous example: the Caesar cipher.

Example: Shift one character.

```
H A L
↓ ↓ ↓
I B M
```

Simple substitution cipher is

each 'H' of plain text become the same charactor.

Vigenere Cipher

plain text: 'CODE'

key: 'ARM'

cipher text: 'CFPE'

Using Computer

We assume the below:

$ P_i $: The i-th charactor of plain text

$ K_i $: The i-th charactor of key

$ C_i $: The i-th charactor of ciphered text

Encrypt:

$$C_i = (P_i + K_i) mod 26$$

Decrypt:

$$P_i = (C_i - K_i) mod 26$$

Kasisky Test

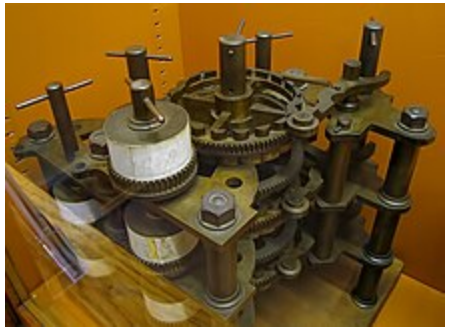
Babbage found the below:

1. Search for strings of the same characters.
2. Count the intervals between the strings.
3. Calculate the common factors of these numbers.
   For example: we found the intervals number are 9, 63, 180, we can calculate the common factors of these numbers are 3 or 9.
4. We can guess the length of the key is 3 or 9.
5. We run it through frequency analysis.

Finally, this is the same as the Caesar cipher with intervals of 3 or 9.

Charles Babbage

- The father of computer.
- discover the steam calculator "Babbage machine".



autokey cipher

Basic Idea

```
Plaintext:  attackatdawn
OrigKey:    QUEENLY
Key:        QUEENLYATTACKATDAWN
Ciphertext: QNXEPVYTWTWP
```

```
Ciphertext: QNXEPVYTWTWP
OrigKey:    QUEENLY
Plaintext:  a
Key:        QUEENLYA
```
