

# Vigenere Cipher

Tam

# Basic knowledge

## Simple substitution cipher

The most famous example: the Caesar cipher.

Example: Shift one character.

H	A	L
↓	↓	↓
I	B	M

Simple substitution cipher is

each 'H' of plain text become the same character.

# Vigenere Cipher

plain text: 'CODE'

key: 'ARM'

cipher text: 'CFPE'

# Using Computer

We assume the below:

\$ P\_i \$ : The i-th character of plain text

\$ K\_i \$ : The i-th character of key

\$ C\_i \$ : The i-th character of ciphered text

Encrypt:

$$C_i = (P_i + K_i) \bmod 26$$

Decrypt:

$$P_i = (C_i - K_i) \bmod 26$$

# Kasisky Test

Babbage found the below:

1. Search for strings of the same characters.
2. Count the intervals between the strings.
3. Calculate the common factors of these numbers.

For example: we found the intervals number are 9, 63, 180, we can calculate the common factors of these numbers are 3 or 9.

4. We can guess the length of the key is 3 or 9.
5. We run it through frequency analysis.

Finally, this is the same as the Caesar cipher with intervals of 3 or 9.

# Charles Babbage

- The father of computer.
- discover the steam calculator "Babbage machine".

# autokey cipher

## Basic Idea

```
Plaintext:  attackatdawn  
OrigKey:    QUEENLY  
Key:        QUEENLYATTACKATDAWN  
Ciphertext: QNXEPVYTWTP
```

```
Ciphertext: QNXEPVYTWTP  
OrigKey:    QUEENLY  
Plaintext:  a  
Key:        QUEENLYA
```
